## Butterfly Valve with ANSI Class 150 Lug types

- Disc 316 stainless steel
- Bubble tight shut-off
- Teflon seat
- Valve face-to-face dimensions comply with API 609 \& MSS-SP-67
- For use with dead-end service
- Completely assembled and tested, ready for installation

5-year warranty

## Default/Configuration

Default parameters for DC 2... 10 V applications of the PKR..-MFT actuator are assigned during manufacturing. If required, different parameters of the actuator can be ordered. These parameters are variable and can be modified by factory pre-set, the handheld ZTH US or using the Belimo App on a smart phone with Near Field Communications (NFC) programming.

Application PR Series valve actuators are designed with an integrated linkage and visual position indicators. For outdoor applications, the installed valve must be mounted with the actuator at or above horizontal. For indoor applications the actuator can be in any location including directly under the valve.

Operation The PR series actuator provides $90^{\circ}$ of rotation and a visual indicator shows the position of the valve. The PR Series actuator uses a low power consumption brushless DC motor and is electronically protected against overload. A universal power supply is furnished to connect supply voltage in the range of AC $24 . . .240 \mathrm{~V}$ and DC $24 \ldots . .125 \mathrm{~V}$. Included is a smart heater with thermostat to eliminate condensation. Two auxiliary switches are provided; one set at $10^{\circ}$ open and the other is field adjustable. Running time is field adjustable from 30 ... 120 seconds by using the Near Field Communication (NFC) app and a smart phone.
tUse $60^{\circ} \mathrm{C} / 75^{\circ} \mathrm{C}$ copper wire size range $12 . . .28 \mathrm{AWG}$, stranded or solid. Use flexible metal conduit. Push the listed conduit fitting device over the actuator's cable to butt against the enclosure. Screw in conduit connector. Jacket the actuators input wiring with listed flexible conduit. Properly terminate the conduit in a suitable junction box. Rated impulse Voltage 4000 V. Type of action 1. Control pollution degree 3.

Bridging time Electrical interruptions can be bridged up to a maximum of 10 s .
In the event of a power failure, the actuator will remain stationary in accordance with the set bridging time. If the power failure is greater than the set bridging time, then the actuator will move into the selected fail-safe position.
The bridging time set ex-works is 2 s . This can be modified on site in operation with the use of the Belimo service tool MFT-P.
Settings: The rotary knob must not be set to the "PROG FAIL-SAFE" position!
For retroactive adjustments of the bridging time with the Belimo service tool MFT-P or with the ZTH EU adjustment and diagnostic device only the values need to be entered.

Factory settings Default parameters for DC $2 \ldots . .10 \mathrm{~V}$ applications of the PKR..-MFT actuator are assigned during manufacturing. If required, different parameters of the actuator can be ordered. These parameters are variable and can be modified by factory pre-set, the handheld ZTH US or using the Belimo App on a smart phone with Near Field Communications (NFC) programming.
