

Fail-Safe actuator used in typical Fire and Smoke damper applications

- Torque motor 30 in-lb [3.5 Nm]
- Nominal voltage AC/DC 24 V
- Control On/Off
- @ 350°F [177°C] for 30 min
- 15 s, <15 s Motor/Fail-safe

## **Technical data**

Product features			
Application		ctuators are designed for the operation and air-conditioning system	
Operation	The actuator is mounted in its fail safe position with the damper blade(s) typically closed. Upon applying power, the actuator drives the damper to the open position. The internal spring is tensioned at the same time. If the power supply is interrupted, the spring moves the damper back to its fail-safe position.		
Typical specification	All smoke and combination fire and smoke dampers shall be provided with Belimo FSTF, FSLF, FSNF, or FSAF series actuators. All substitutions must be approved before submission of bid. Damper and actuator shall have UL555S Listing for 250°F and/or 350°F. Actuator shall have been tested to UL2043 per requirements of IMC 602.2 and NEC 300.22 (c). Where position indication is required -S models with auxiliary switches shall be provided.		
Accessories

Electrical installation			
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~			

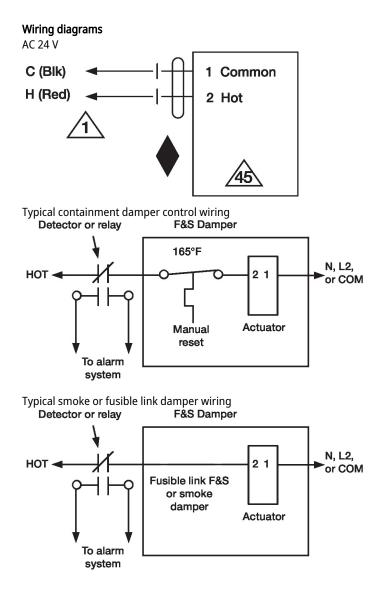

APPLICATION NOTES Provide overload protection and disconnect as required. Actuators may be powered in parallel. Power consumption must be observed.

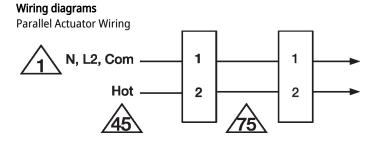

Typical smoke or fusible link damper wiring
