P2050B035-P, 1/2", Pressure Independent Valve Chrome Plated Brass Ball and Brass Stem, NPT Female Ends

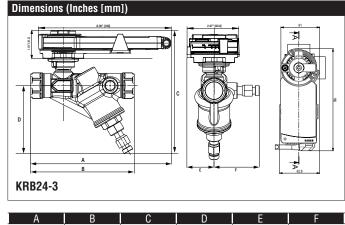

Application

The Pressure Independent Characterized Control Valve is typically used in air handling units on heating and cooling coils, and fan coil unit heating or cooling coils. Some other common applications include unit ventilators and VAV reheat coils. This valve is suitable for use in a hydronic system with constant or variable flow. This valve is designed with MFT functionality which facilitates the use of various control input.

Technical Data	
Service	chilled, hot water, up to 60% glycol
Flow Characteristic	equal percentage
Controllable Flow Range	75°
Size [mm]	0.5" [15]
End Fitting	NPT female ends
Body	forged brass, nickel plated
Ball	chrome plated brass
Stem	chrome plated brass
Seat	fiberglass reinforced Teflon® PTFE
Seat O-ring	Viton
Characterized Disc	Brass
Packing	EPDM
Diaphragm	Nomex reinforced Silicone
Regulator Components	stainless steel / brass / Nitrile
Body Pressure Rating [psi]	600
Media Temperature Range (Water)	0°F to 212°F [-18°C to 100°C]
Differential Pressure Range	5 to 50 psi
Close-Off Pressure	200 psi
Rangeability	100:1
Valve Accuracy	± 5%*
Weight	2 lb [0.9 kg]
GPM	3.5
Leakage	ANSI Class IV
*See page 3 of the PICCV technical do	ocumentation for details.

Modulating, Spring Return, Multi-Function Technology® Wiring Diagrams 24 VAC Transformer 🔀 INSTALLATION NOTES Actuators with appliance cables are numbered. Line Volts Provide overload protection and disconnect as required. Actuators may be connected in parallel. Power consumption and input impedance must be observed. Position Apply only AC line voltage or only UL-Class 2 voltage to the terminals of Feedback VDC (+) auxiliary switches. Mixed or combined operation of line voltage/safety extra low voltage is not allowed. On/Off Actuators may also be powered by 24 VDC. 24 VAC Transformer (AC Only) Two built-in auxiliary switches (2x SPDT), for end position indication, interlock control, fan startup, etc. Line Only connect common to negative (-) leg of control circuits. Volts A 500 Ω resistor (ZG-R01) converts the 4 to 20 mA control signal to 2 Control signal may be pulsed from either the Hot (Source) or Common Position (-) (Sink) 24 VAC line. Feedback VDC (+) For triac sink the Common connection from the actuator must be **Floating Point** connected to the Hot connection of the controller. Position feedback cannot be used with a triac sink controller; the actuator internal 24 VAC Transformer common reference is not compatible. Actuators may be connected in parallel if not mechanically linked. Power consumption and input impedance must be observed. Line Volts IN4004 or IN4007 diode. (IN4007 supplied, Belimo part number **500** Ω ¦Ωi 1/4 watt Meets cULus requirements without the need of an electrical ground Control Signal (-) VDC / mA (+) connection. Actuators are provided with color coded wires. Wire numbers are provided for reference. WARNING! LIVE ELECTRICAL COMPONENTS! During installation, testing, servicing and troubleshooting of this **VDC/mA Control** product, it may be necessary to work with live electrical components. Have a qualified licensed electrician or other individual who has been 24 VAC Transformer (AC Only) properly trained in handling live electrical components perform these tasks. Failure to follow all electrical safety precautions when exposed to live electrical components could result in death or serious injury. Line Volts
