Application

Water-side control of heating and cooling systems for AHUs and water coils. Equal Percentage/ Linear: heating and cooling applications.

Operation

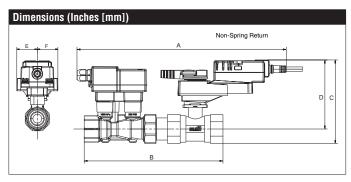

The Electronic Pressure Independent Control Valve is a two-way valve that maintains constant flow regardless of pressure variations in the system.

Product Features

Provides constant flow regardless of pressure variations in the system. $\label{eq:maximizes} \mbox{ Maximizes chiller P, preventing energizing additional chillers due to low \ T.}$ Simplified valve sizing and selection, no Cv calculations required.

X INSTALLATION NOTES

Provide overload protection and disconnect as required.

Actuators may be connected in parallel. Power consumption and input impedance must be observed.

Actuators may also be powered by 24 VDC.

Actuators with plenum cable do not have numbers; use color codes instead.

IN4004 or IN4007 diode required

Meets cULus requirements without the need of an electrical ground connection.

WARNING! LIVE ELECTRICAL COMPONENTS!

During installation, testing, servicing and troubleshooting of this product, it may be necessary to work with live electrical components. Have a qualified licensed electrician or other individual who has been properly trained in handling live electrical components perform these tasks. Failure to follow all electrical safety precautions when exposed to live electrical components could result in death or serious injury.

Modbus control for Non-Spring Return

Modbus signal assignment:

galvanically isolated.

 $C_1 = D_1 = A$ $C_2 = D + = B$ Power supply and communication are not Interconnect ground signal of the devices.

Modbus control with switching contact for Non-Spring Return Requirements for switching contact:

The switching contact must be able to accurately switch a current of 16 mA at $24\,\text{V}$.

Modbus control with active sensor for Non-Spring Return

Possible input voltage range:

0...32 V (resolution 30 mV)

Modbus control with local override (AC only, analogue override) for Non-Spring Return

Note

If no sensor is integrated, then connection 3 (Y) is available for the protective circuit of a local override control. Options: CLOSED, Vmax, OPEN
