

Differential pressure sensor Air

Differential pressure transmitter with 8 selectable ranges and Modbus funtionality. For monitoring over-, under or the differential pressure of air and other non-flammable and non-aggressive gases. Typical application in HVAC systems for monitoring air filters, fans V-belts or fire and smoke control dampers. Options available with LCD display. NEMA 4X / IP65 rated enclosure.

Technical data sheet

Type Overview

Туре	Measuring range pressure [Pa]	Measuring range pressure [inch WC]	Communication	Output signal active pressure	Output signal active volumetric flow	Burst pressure	Display type
22ADP-554	-1002500	-0.410	Modbus RTU	05 V, 010 V	05 V, 010 V	160 inch WC [40 kPa]	-
22ADP-554L	-1002500	-0.410	Modbus RTU	05 V, 010 V	05 V, 010 V	160 inch WC [40 kPa]	LCD

Technical data

	Nominal voltage range	AC 1929 V / DC 1535 V
	Power consumption AC	2 VA
	Power consumption DC	1.4 W
	Electrical connection	Pluggable spring loaded terminal block max. 2.5 mm²
	Cable entry	Cable gland with strain relief 2 x Ø6 mm (1/2" NPT conduit adapter included)
Functional Data	Sensor Technology	piezo measuring element
	Application	air
	Communication	Modbus RTU
	Multirange	8 measuring ranges selectable
	Voltage output	2x 05 V, 010 V, min. load 10 kΩ
	Output signal active note	Output 05/10 V selectable with switch
	Display	LCD, 1.14x1.38 in. [29x35 mm], Measured values: Pa, inch WC (programmable), with backlight, measured values volumetric flow: m ³ /h, cfm (parametrisable)
	Response time	adjustable 0.8 s or 4.0 s
Measuring Data	Measured values	Differential pressure
	Measuring fluid	air and non-aggressive gases

Safety Notes

This device has been designed for use in stationary heating, ventilation and air-conditioning systems and must not be used outside the specified field of application. Unauthorized modifications are prohibited. The product must not be used in relation with any equipment that in case of a failure may threaten humans, animals or assets.

Ensure all power is disconnected before installing. Do not connect to live/operating equipment.

Only authorized specialists may carry out installation. All applicable legal or institutional installation regulations must be complied during installation.

The device contains electrical and electronic components and must not be disposed of as household refuse. All locally valid regulations and requirements must be observed.

Manua	l zero-point calibration	In normal operation zero-point calibration should be executed every 12 months. Attention! For executing zero-point calibration the power supply must be connected one hour before. • Release both connection tubes from the pressure terminals + and - • Press the button until the LED lights permanently • Wait until the LED flashes again and reinstall the connection tubes to the pressure ports (note + and -)

	Pitot tube, Metal, L 1.5", Tube connection 0.2" Pitot tube, Metal, L 4", Tube connection 0.2" Description Belimo Duct Sensor Assistant App Bluetooth dongle for Belimo Duct Sensor Assistant App

Certified and available in North America, European Union, EFTA States and UK.

Service tools connection This sensor can be operated and parametrized using the Belimo Assistant App.

> When using the Belimo Duct Sensor Assistant App, the Bluetooth dongle is required to enable communication between the app and the Belimo sensor.

For the standard operation and parametrization of the sensor the Bluetooth dongle and the Belimo Duct Sensor Assistant App are not needed. The sensor will arrive pre-configured with the factory default settings shown above.

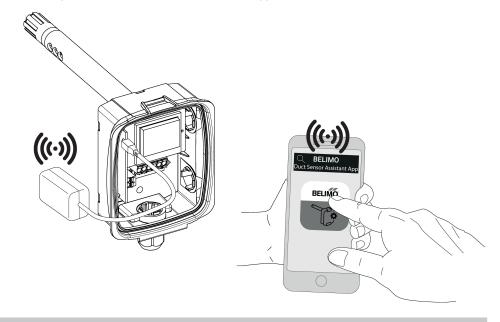

Requirement:

- Bluetooth dongle (Belimo Part No: A-22G-A05)
- Bluetooth-capable smartphone
- Belimo Duct Sensor Assistant App (Google Play & Apple App Store)

Procedure:

- Plug the Bluetooth dongle into the sensor via the Micro-USB connector or by means of the interface PCB

- Connect Bluetooth-capable smartphone with Bluetooth dongle
- Select parametrization in the Belimo Assistant App

Wiring Diagram

Notes Supply from isolating transformer.

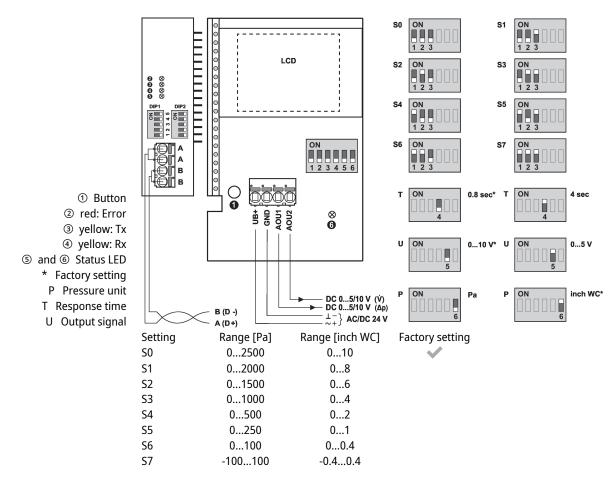

> The wiring of Modbus RTU (RS485) is to be carried out in accordance with applicable regulations (www.modbus.org). The device has switchable resistors for bus termination.

> Modbus-GND: Supply and communication are not galvanically isolated. Connect earth signal of the devices with one another.

22ADP-554.

Detailed documentation

The separate document Sensor Modbus-Register informs about Modbus register, addressing, parity and bus termination (DIP1: address, DIP2: baud rate, parity, bus termination)

In addition to the information on the bus, the following analog outputs are available:

AOU1: differential pressure

AOU2: volumetric flow

The volumetric flow is calculated from the differential pressure, the k-factor and the height. Factory setting for the k-factor is 1.00 and for the height 330 metres above sea level. The values of the k-factor and the height can be changed via bus system.

Wiring RS485 Modbus RTU
