#### > INSTALLATION NOTES

(A) Actuators with appliance cables are numbered.

Provide overload protection and disconnect as required.

Actuators may be connected in parallel. Power consumption and input impedance must be observed.

\ Actuators may also be powered by 24 VDC.

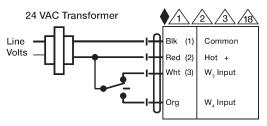

Actuators Hot wire must be connected to the control board common. Only connect common to neg. (-) leg of control circuits. Terminal models (-T) have no-feedback.

One built-in auxiliary switch (1x SPDT), for end position indication, interlock control, fan startup, etc.

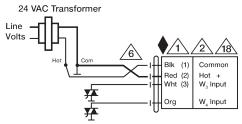

Meets cULus requirements without the need of an electrical ground connection.
