Application
The FS series of spring-return actuators are designed for the operation of UL555 and UL555S
listed fire/smoke dampers in ventilation and air-conditioning systems.
Operation The actuator is mounted in its fail safe position with the damper blade(s) typically closed. Upon
applying power, the actuator drives the damper to the open position. The internal spring is
tensioned at the same time. If the power supply is interrupted, the spring moves the damper
back to its fail-safe position.
Typical specification
All smoke and combination fire and smoke dampers shall be provided with Belimo FSTF, FSLF,
FSNF, or FSAF series actuators. All substitutions must be approved before submission of bid.
Damper and actuator shall have UL555S Listing for $250^{\circ} \mathrm{F}$ and/or $350^{\circ} \mathrm{F}$. Actuator shall have
been tested to UL2043 per requirements of IMC 602.2 and NEC 300.22 (c). Where position
indication is required -S models with auxiliary switches shall be provided.

Meets cULus requirements without the need of an electrical ground connection.

1. Provide overload protection and disconnect as required.

3 Actuators may also be powered by DC 24 V .
45 Actuators may be powered in parallel. Power consumption must be observed.
亿12 $S 4$ makes to S 6 when actuator is powered open.
13 Auxiliary switches are for end position indication or interlock control.
14. Double insulated.

188 500 ohm load resistor for $4 . . .20 \mathrm{~mA}$. Only one resistor for multiple actuators.
19. Primary/secondary operation/wiring of mechanically paralleled ("piggyback") Fire and Smoke actuators will not function.
४0 Actuators may be electrically paralleled on different damper sections that are not mechanically connected to one another.
8. Smoke relay and primary heat responsive sensor may be located in hot wire.

82 Only one smoke signal and/or thermal sensor may be employed for all paralleled actuators.
885 Any wire 5 feedback could be used to indicate position or to drive actuators that are not mechanically paralleled. That is, they are on other dampers.
