## Safety notes

-     * Neither UL nor Belimo require local over-current protection. The FSNF actuators draw higher peak current when driving against any type of stop. If used, this requires the value of a local fuse or breaker to be increased to avoid nuisance opening or tripping. A 2.5 A slow blow should be used for AC 24 V. A 0.5 A slow blow should be used for AC 120 V. A 0.25 A slow blow should be used for 230 V and a 0.3 A slow blow for AC 208 V . Transformers: Note that while a 24 V 100 VA transformer would handle 2 actuators, a 4 A breaker or plug fuse is insufficient. A 5 A slow blow would be required.
- Belimo Fire \& Smoke actuators have passed the AMCA 520 and UL 555S Long Term Holding test. No special cycling is required during prolonged periods when actuator is driven open and held there. Periodic testing of dampers and actuators per local codes and NFPA 80 and NFPA 105 are required.
- The actuator contains no components which the user can replace or repair. A $1 / 2^{\prime \prime}$ threaded connector is standard. FSNFxx-FC models have a 3/8" Flex Connector. Other than the connector, these actuators are identical to the conduit connector version.

## Product features

$$
\begin{array}{ll}
\text { Application } & \begin{array}{l}
\text { The FS series of spring-return actuators are designed for the operation of UL555 and UL555S } \\
\text { listed fire/smoke dampers in ventilation and air-conditioning systems. }
\end{array} \\
\text { Operation } & \begin{array}{l}
\text { The actuator is mounted in its fail safe position with the damper bladess) typically closed. Upon } \\
\text { applying power, the actuator drives the damper to the open position. The internal spring is } \\
\text { tensioned at the same time. If the power supply is interrupted, the spring moves the damper } \\
\text { back to its fail-safe position. }
\end{array} \\
\text { Typical specification } & \begin{array}{l}
\text { All smoke and combination fire and smoke dampers shall be provided with Belimo FSTF, FSLF, } \\
\text { FSNF, or FSAF series actuators. All substitutions must be approved before submission of bid. } \\

## Electrical installation

## $\not \subset$ INSTALLATION NOTES

A Provide overload protection and disconnect as required.
45 Actuators may be powered in parallel. Power consumption must be observed.
12. S4 makes to S6 when actuator is powered open.

173 Auxiliary switches are for end position indication or interlock control.
7. Double insulated.

45 Ground present on some models.
