

M9102-AGA-2S, -3S and M9104-xxA-2S, -3S Series Electric Non-Spring Return Actuators

Product Bulletin

Code No. LIT-1201742
Issued October 2017

The M9102 and M9104 Series Actuators are direct-mount, non-spring return electric actuators that operate on AC 24 V or 100 to 240 VAC power. These motor-driven actuators provide floating control (AGA), floating control with automatic shutoff (IGA), proportional control with selectable 0-10 or 2-10 VDC (GGA), and line voltage power supply (IUA). The -2S models are equipped with plenum cables, and the -3S models are equipped with terminal blocks.

All models are compact in size and are easily installed on VAV boxes, Variable Air Volume and Temperature (VVT) two-position zone applications, or small- to medium-sized dampers with a round shaft up to 1/2 in. (13 mm) in diameter or a 3/8 in. (10 mm) square shaft.

The M9102 Series Electric Non-Spring Return Actuators provide a running torque of 18 lb-in (2 N-m), and the nominal travel time is 30 seconds at 60 Hz (36 seconds at 50 Hz) for 90° of rotation.

The M9104 Series Electric Non-Spring Return Actuators provide a running torque of 35 lb-in (4 N-m), and the nominal travel time is 60 seconds at 60 Hz for 90° of rotation.

Table 1: Features and Benefits

Features	Benefits
Two Torques Available: 18 and 35 lb-in (2 and 4 N-m)	Offer the most suitable choice for the specific application.
Short 30-Second Travel Time Available	Provides a quick response for two-position zone applications.
35 dBA Maximum Audible Noise Rating at One Meter	Meets the audible noise requirements for open ceiling environments.
Synchronous Drive (AGA, IGA, GGA models)	Provides a constant rotation time that is independent of the load.
100,000 Cycle Rating	Provides years of trouble-free service.
Direct Shaft Mounting with Single-Screw Coupler	Reduces installation time and provides three-point shaft gripping.
Magnetic Clutch	Protects the actuator gear train and the damper from damage due to excessive torque during a stall condition.
Manual Gear Release	Simplifies actuator setup and adjustments in the field.
Plenum Cable or Screw Terminal Electric Connections	Make wiring quick and easy.
Floating, Floating with Timeout, and Proportional 0(4)...10 VDC Control Inputs Available	Offer a full range of control input options.
Small, Compact Design	Allows installation in tight-fitting locations.

Product Details

The M9102 and M9104 Series Electric Non-Spring Return Actuators are designed to position balancing, control, round, and zone dampers in HVAC systems. These electric actuators are also designed to position blades in a VAV box, or they can be used in VVT two-position zone applications.

Each actuator mounts directly to the surface in any convenient orientation using a single No. 10 standard sheet metal screw (included with the actuator). No additional linkages or couplers are required. Electrical connections on the actuator are clearly labeled to simplify installation.

IMPORTANT: Use this M9102 or M9104 Series Electric Non-Spring Return Actuator only to control equipment under normal operating conditions. Where failure or malfunction of the electric actuator could lead to personal injury or property damage to the controlled equipment or other property, additional precautions must be designed into the control system. Incorporate and maintain other devices, such as supervisory or alarm systems or safety or limit controls, intended to warn of or protect against failure or malfunction of the electric actuator.

IMPORTANT: Do not install or use this M9102 or M9104 Series Electric Non-Spring Return Actuator in or near environments where corrosive substances or vapors could be present. Exposure of the electric actuator to corrosive environments may damage the internal components of the device and will void the warranty.

Operation

When combined with a VAV or VVT controller, the M9102 or M9104 Series Electric Non-Spring Return Actuator provides reliable, integrated damper control.

AGA Models

An AC 24 V input signal from the controller to the clockwise (CW) or counterclockwise (CCW) terminal on the electric actuator causes the motor to rotate in the proper direction, and moves the damper blades open or closed. When the controller stops sending the input signal, the electric actuator remains in place.

Note: Use a VAV or VVT controller and/or software that provides a timeout function at the end of rotation (stall) to avoid excessive wear or drive time on the actuator motor.

IGA Models

The IGA models operate in the same fashion as the AGA models, except the motor automatically shuts off after a time delay. IGA models can be used with controllers that apply a constant CW or CCW signal.

GGA Models

The GGA models accept a 0(4)...10 VDC command signal to position the Output hub. The GGA-2S actuator returns a 0-10 volt position indication on the Feedback signal. A selectable switch or an mA input with a field supplied resistor allows 0 to 10 VDC or 2 to 10 VDC commands and Reverse Acting/Direct Acting (RA/DA) operation.

IUA Models

The IUA models operate on AC 100 to 240 V (-15% +10%) power and work with a variety of controllers. These actuators include an integrated 48 in. (1.2 m) long cable.

Repair Information

If the M9102 or M9104 Series Electric Non-Spring Return Actuator fails to operate within its specifications, replace the unit. For a replacement electric actuator, contact the nearest Johnson Controls® representative.
