

# Actuators Specification and Installation Instructions

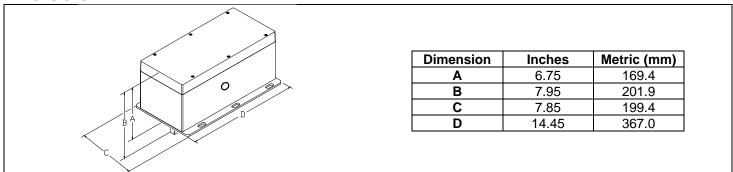

Feature:	UM000
• Up to 4000 in.lb [450Nm].	UM020
Clutch for manual adjustments.	UM010
Maintenance free.	UM030
Control signal fully programmable.	WM000
<ul> <li>Fail safe (battery backup) (on model 010 &amp; 030).</li> </ul>	WM020 WM010
Auxiliary switches (on model 020 & 030).	WM030

IP56 enclosure.

### Narning: Do not press the clutch when actuator is powered

### **Dimensions**

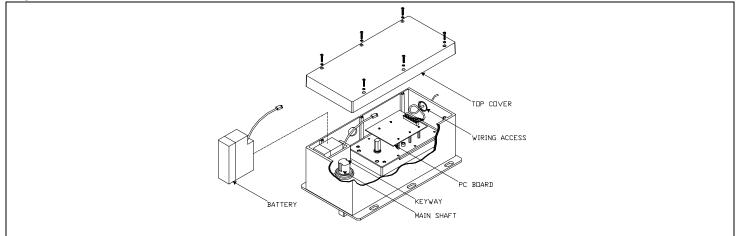

#### Caution

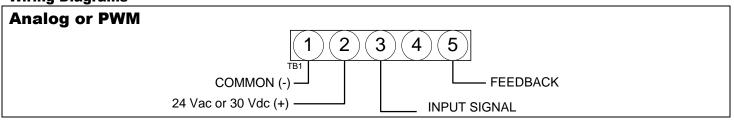

We strongly recommend that all neptronic® products be wired to a separate transformer and that transformer shall service only neptronic® products. This precaution will prevent interference with, and/or possible damage to incompatible equipment. When multiple actuators are wired on a single transformer, polarity must be observed. Long wiring runs create voltage drop which may affect the actuator performance.

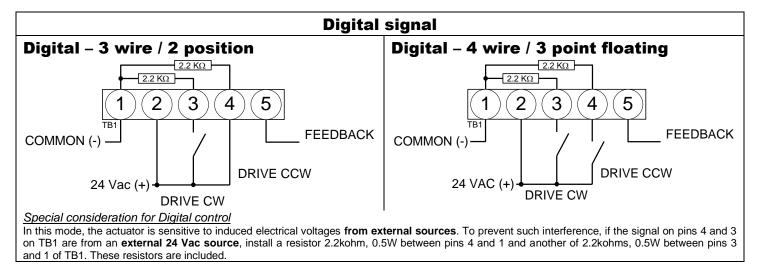

# **Exploded view**

### **Wiring Diagrams**

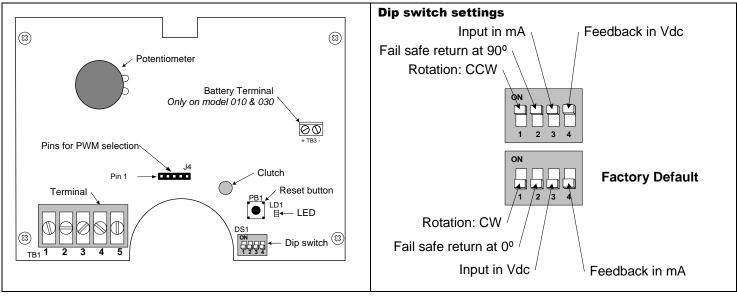

# **Input Signal and Feedback setup**

	Input Signal	Feedback	
Analog Mode	Input Signal is set with Dipswitch # 3 DS1-3 at OFF = 2 – 10Vdc (default setting) DS1-3 at ON = 4 – 20mA	Feedback is set with Dipswitch #4	
Digital & PWM Mode	No Input Signal Setting DS1-3 MUST be at OFF	DS1-4 at OFF = 4 – 20mA (default setting) DS1-4 at ON = 2 – 10Vdc	

#### **PC Board**

# Stroke adjustment - No control signal change

- 1. Apply power and, wait for at least 10 seconds.
- 2. Press and release the reset button to start the auto-stroke process. The LED should be illuminated.
  - First option:

The actuator will then travel in both directions to find its limit and position itself according to the demand. The LED will extinguish, the process is complete.

 Second option: When the desired end position is reached, press and release the reset button. The actuator will now return back to its original position. (you can also press and release the reset button when It's reaches the original position) The LED will extinguish, the process is complete.

# Programming – Change of control signal & PWM pulse setting

- 1. Remove power and put all dip switches "OFF" (factory preset).
- 2. Apply power and, within 10 seconds, press and release the reset button. The LED should be blinking.
- 3. Select the control signal with dip switches:

	Digital or Analog Modes	PWM Mode
Move switch <b><u>No1</u></b> "ON" and then "OFF".	Digital (On/Off or 3 point floating)	5 sec. pulse (factory preset)
Move switch <u>No2</u> "ON" and then "OFF".	Analog (Default)	25 sec. pulse

Stroke adjustment

see the stroke adjustment section above.

# **Enabling or disabling PWM mode**

1.	Remove po	ower supply	y to actuator					
2.	Install jump	per betwee	n pin 3 & 4 of J4					
3.	Select the	desired act	tion using the dipswitches (	DS1):	J4			
	DS1-1	DS1-2	Action					
	OFF	ON	Enable PWM Mode					
	ON	OFF	Disable PWM Mode		с 0 6 4 G			
4.	Re-apply p	ower supp	ly to actuator	n n n n n n				
5.	Wait 5 sec	onds						
6.	6. Remove power supply to actuator							
7.	Remove ju	mper betw	een pin 3 & 4 of J4, re-insta					
8.	Re-apply p	ower supp	ly to actuator	When not used for programming,				
	PWM is fac	ctory prese	t at 5 sec. pulse,	jumper is placed between pin 4 & 5				
	refer to pro	gramming	section above to change p					

# UM000/020/010/030 WM000/020/010/030

### Zero and span calibration

This feature is applicable to analog control signal only.

- 1. Remove power and put all dip switches "OFF". (factory preset).
- 2. Apply power and, **within 10 seconds** press and hold the reset button until the LED blinks once. The Zero and span calibration process then start.
- 3. Release the reset button. The LED is now constantly illuminated.
- 4. Apply new minimum voltage. It can be any value between 0 to 7 VDC, with an external 0 to 10 volt supply (ex: MEP).
- 5. Press and release the reset button to memorize the new minimum voltage. The LED blinks once.
- Apply new maximum voltage. It can be any value between 3 to 10 VDC, this value should be greater than the new minimum value.
- 7. Press and release the reset button to memorize the new maximum voltage. The LED blinks once. The Zero and span calibration process is complete.
- Note: To reset zero and span to 2 to 10 VDC (factory value). You just have to re-select the analog control signal mode, see Programming.

### Wiring Diagrams for auxiliary switches (on model 020 & 030)
