

## Feature:

- Up to 3500 in.lb [ 400 Nm ].

UT000

- Clutch for manual adjustments. UT020
- Maintenance free. UT010
- Fail safe (battery backup)
(on model 010 \& 030 ).
WT000
- Auxiliary switches

## Wiring Diagrams

## 5 wire / 3 point floating

For 2 to 10 VDC output feedback
For any of above wiring configurations, connect one of the supplied 500 ohm resistors between pins 1 and 6 .

## Stroke adjustment

To adjust the stroke, press and release the reset button to start the auto-stroke process.
The LED should be illuminated.

- First option:

The actuator will then travel in both directions to find it's limit.
The LED will extinguish, the process is complete.

- Second option:

When the desired end position is reached, press and release the reset button. The actuator will now return back to its original position. (you can also press and release the reset button when It's reaches the original position)
The LED will extinguish, the process is complete.

[^0]:    We strongly recommend that all Neptronic® products be wired to a separate transformer and that transformer shall service only Neptronic® products. This precaution will prevent interference with, and/or possible damage to incompatible equipment.
    When multiple actuators are wired on a single transformer, polarity must be observed. Long wiring runs create voltage drop which may affect the actuator performance.
