

## Toroidal Solid Core Current Transformers Revenue Grade Small and Large Sizes

### Description

The Siemens SCT-RGT12 series of Solid-Core current transformers are designed for Revenue Grade applications that require maximum accuracy and precision when used with the Siemens MD series power meter. These toroidal current transformers are designed for applications where an AC current signal must be transformed into lower AC current or voltage signal appropriate for micro-processor based circuits.

This series of CTs is designed specifically for integration into products which require exceptionally accurate signal transformation with low phase shift while exposed to harsh environmental operating conditions. They are ideal for use in high accuracy current measurement applications such as energy and demand metering, tenant submetering, solar power measurement, and load surveys.

Revenue Grade performance of these CTs meets or exceeds the accuracy specifications for IEC 61869-2 Class 0.2 and IEEE C57.13 Class 0.3.

They are available for current inputs up to 400 Amps.
